

HYPN  LUMIERE

DEEP STATE
TRAINING

HYPNOLUMIERE

Hypnolumiere is a mind driven brainwave entrainment system that will help you reach deep hypnagogic trance states. The lamp stimulates your mind through a sequence of flickering lights in order to create powerful colourful Kaleidoscopic images, psychedelic forms and sacred geometric mandala like shapes.

The Hypnolumiere and the Vilistus Neurofeedback system will benefit your practice by offering deep state training that will allow you to create and maintain desired changes.

“The hypnagogic state is considered by many to be a genius state, without boundaries or any limitations.”

— Brian L. Weiss

Possible uses:

- Relaxation
- Hypnotic inductions
- Creating inner desired changes
- Hypnagogic States
- Creative States
- Deep Meditation
- Altered states of consciousness

The Hypnolumiere EEG Feedback

The Hypnolumiere is a light neuro-signaling system that connects to the Vilstus Neurofeedback System . The Vilstus Neurofeedback system will check your brainwaves in real time and will send the correct frequency to the Hypnolumiere to enhance your experience.

Hypnolumiere is a fully programmable stroboscopic lighting system consisting of 3 bright white LEDs and multiple arrays of colour LEDs.

Full Feedback Loop

Hypnolumiere works in conjunction with the Vilstus neurofeedback system.

The Vilstus is an ideal full biofeedback and neurofeedback system that is being used around the world by therapists, researchers, educators and high performance trainers as well as people using it at home for self improvement.

Hypnolumiere can be used as both a feed-back and feed-forward system.

Used as a feed-back system, the Vilstus will read your brainwaves and will calculate the right frequency to be sent to the hypnolumiere to enhance your experience and bring you or the subject to a desired state.

Hypnolumiere could also be used as a simple feed-forward system as it offers a wide range of colours. You can associate your favourite colours to certain brain states and train yourself to them without having to look at a pc screen.

Safety :

- The Lamp would be safe when used with eye closed and should never be used eye open.
- It is countra indicated due to its stroboscopic function to people suffering from epilepsy.
- The use of bright light makes it also countra indicated to people who suffer from light sensitivity.

Standalone

Hypnolumiere also works as a stand alone system; we provide a series of sessions files that are designed to give you various different amazing experiences.

In our stand alone sessions you will find a Hypnogogic session that will bring you into a world of vivid colours and forms that are entirely generated by your own mind.

You will also find sessions that will help you to unleash your creativity, improve your learning skills, reach Zen like states and help you to go to sleep.

We are constantly creating more sessions to offer you a variety of different experiences.

Hypnolumiere can also be used for colour therapy; allowing you to select any colour that you may require for your session.

The Vilistus Neurofeedback System

- Simple to Use
- Ideal for Home Training
- Comprehensive Support
- Highly Portable
- Comprehensive Feedback
- Multi-person Capability
- Extensive range of sensors
- Biometric Recording
- Quality Signals and High Speed Data
- Programmers API
- Get more information Behind

We've designed the Neurofeedback Personal Training Pack to be simple to use right out of the box.

From providing a BraiNet 10-20 template to give accurate placement of electrodes through to the extremely easy to use Vilistus/Pro software, you can be up and running in minutes

But don't let the ease of use fool you, the Neurofeedback Personal Training Pack is fully featured and is being used around the world by therapists, researchers, educators and high performance trainers as well as people using it at home for self improvement.

Use our training protocols or develop your own! Out of the box, you can train for relaxation, peak performance and focus/attention, or just use it for brainwave monitoring.

Get better at your chosen sport, concentrate in the classroom or the boardroom and learn to keep your energy levels up.

Hypnolumiere Personal Entrainment System (PES)

Hypnolumiere PES is the new multi-layered approach to stimulating creativity and visualisation.

With Hypnolumiere Special Edition, you get 4 ultra-bright RGB LED's allowing upto TWO MILLION different colour combinations. Separately programmable, the LEDS in the Hypnolumiere PES glasses provide a stunning visual experience and the opportunity to enjoy solid Ganzfeld lighting that varies in hue and brightness.

Add the hypnagogic entrainment option which adds bright-white LEDS to deliver the most flexible, portable and powerful entrainment experience available today,

But... You can only go so far with entrainment; what's really required is dynamic monitoring of internal brain waves and adapting the output of the Personal Entrainment System to ensure the most accurate and immediate change of state. With Hypnolumiere's personal feedback option we combine the Personal Entrainment System with market leading neurofeedback to deliver entrainment and feedback simultaneously.

Personal Entrainment and neurofeedback. A unique combination available today from Hypnolumiere.
